AB The performance of six 2-quinolylazo compds. (HL) as precolumn derivatizing reagents for reversed-phase HPLC separation of metal ions using an ODS column was studied. Four metal ions were detected as [FeIIL2], [CoIIL2]+, [NiL2] and [CuIIL]+, resp. Addition of thiocyanate ion to the mobile phase enhanced the retention of [CuIIL]+ to give a better separation from the solvent peak, compared with other anions. Phenol derivs. afforded a shorter anal. time than naphthol derivs. Replacement of MeCN by acetone as organic modifier reduced the retention of Fe, Ni and Co more than that of a free ligand and Cu, and induced the change of elution order from Cu, Co, HL, Ni, Fe to Co, Cu, Ni, Fe, HL.
